RESOURCES CONSUMPTION

Vertical autoclaves without drying

The **AES** Series vertical floor-standing autoclaves with top-loading access cover the fundamental needs for general labware sterilization in many industries, educational institutions and research facilities with the aim of increasing the productivity of the laboratory. A great chamber capacity together with the optimization of resources such as water, power and operating time results in an affordable and efficient solution to manage laboratory workload.

INTENDED USE

+ **STERILIZATION OF LABORATORY WASTE BAGS, PLASTICS, CULTURE MEDIA, GLASSWARE, LIQUIDS AND METAL UTENSILS**

MAIN FEATURES

ECONOMIC AND DURABLE

AES Series autoclaves are economic and robust autoclaves with excellent performance for general laboratory sterilization procedures. They can be used either for solids and liquids sterilization procedures and they consume limited valuable laboratory resources such as water, power or operator time.

MULTIPLE TYPES OF STERILIZATION CYCLES

Several options available to perform solids or liquids sterilization. Optional flexible temperature probe for load sensed sterilization of liquids, temperature holding at the end of the sterilization cycle for culture media and manual unsteaming push-button for a faster cooling phase of solids.

EASY INSTALLATION AND MAINTENANCE

Every **AES** Series autoclave is a plug and play equipment that do not need dedicated installation connections. They simply need a power source and can work even without a connection to the drainage. All models include casters so they can be used in different areas of the same facility.

SAFETY FIRST

AES Series autoclaves are equipped with several features to ensure the safety of the operators. These include an overpressure safety valve, a thermally insulated door, an overtemperature safety thermostat, an open door detection system and an independent safety pneumatic system that locks the main door while positive pressure exists inside the sterilization chamber.

ADVANTAGES

Sterilization chamber and door made of high quality stainless steel grade AISI-316L extremely resistant to corrosion.

Equipment built following all applicable European Union quality, regulatory and safety standards.

Heating by powerful electric elements made of Incoloy® 825 assembled inside the sterilization chamber and shielded by a protective grid.

Control by a PID microprocessor with 4 predefined and 6 editable programs, adjustable by time, temperature and type of sterilization cycle (Agar mode and/or probe temperature probe control).

Manual steam release push-button for a faster cooling phase in solids sterilization cycles.

Available special models with augmented power to achieve faster heating and sterilization phases.

Adjustable temperature holding at the end of the sterilization cycle between 40-80°C (Agar mode).

Programmable auto-start for up to 24h.

Optional software for sterilization data management.

Optional integrated or external printer.

Plug and play equipment, no plumbing required.

Easy mobility, all models include casters.

STERILIZATION APPLICATIONS

AES Series autoclaves are intended for the sterilization of a wide range of liquids and solids such as culture media, glassware, plastics, metal utensils, waste bags and other laboratory items. These reliable workhorses for the general laboratory are designed for an easy operation and include many safety features to protect users in their daily routine.

Vertical autoclaves without drying

WORKING PRINCIPLE

AES Series autoclaves provide a solution for the multiple sterilization needs of general laboratories including liquids, culture media, biological waste, contaminated media, instruments, glassware and other laboratory items.

The load has to be placed into the vessel's baskets and, after manually filling the tank with purified water, the equipment starts to heat up and purge until the set combination of sterilization time and sterilization temperature is reached.

DIGITAL MICROPROCESSOR

Digital microprocessor with 6 push-buttons for an easy programming and parameters selection.

AES SERIES PROGRAMS

AES Series autoclaves have 10 programs, from P0 to P9, and the first four are predefined and protected.

PREDEFINED PROGRAMS

Program N°	Sterilization temperature °C	Sterilization time min	Program mode Agar mode or Probe probe
P0	115	60	SOL/LIQ-1
P1	121	30	SOL/LIQ-1
P2	133	20	SOL/LIQ-1
P3	121	20	SOL/LIQ-1

The rest of the programs are editable with the following parameters settings:

- Sterilization temperature.
- Sterilization time.
- Sterilization controlled by main chamber temperature probe or both main chamber temperature probe plus probe temperature probe.
- Sterilization with temperature holding at the end of the cycle (Agar mode).

STANDARD AES SERIES STERILIZATION CYCLE

HEATING PHASE

- In this initial step, the powerful heating elements assembled at the bottom of the sterilization chamber heat up dramatically, transferring energy to water to produce saturated steam throughout the chamber.
- To shorten the duration of this step, RAYPA offers special models with increased power, a feature of particular interest for autoclaves operating in laboratories with high workloads.

STERILIZATION PHASE

- Upon reaching the set sterilization temperature inside the chamber the sterilization phase begins, accurately sustaining the temperature throughout the duration of this phase.
- This crucial step is controlled by a PT-100 Class A temperature probe located within the chamber. As an option for liquids sterilization processes, this phase can be regulated by a flexible PT-100 Class A temperature probe located inside a sample.

COOLING PHASE

- After sterilization phase finishes, natural cooling begins and an acoustic beep will sound when a safety temperature is reached and the door can be opened.
- In solid programs, discharge can be manually forced through a push-button to reduce the duration of the cooling phase.
- If Agar mode is activated, the equipment will hold the preprogrammed temperature indefinitely, selectable between 40 and 80°C.

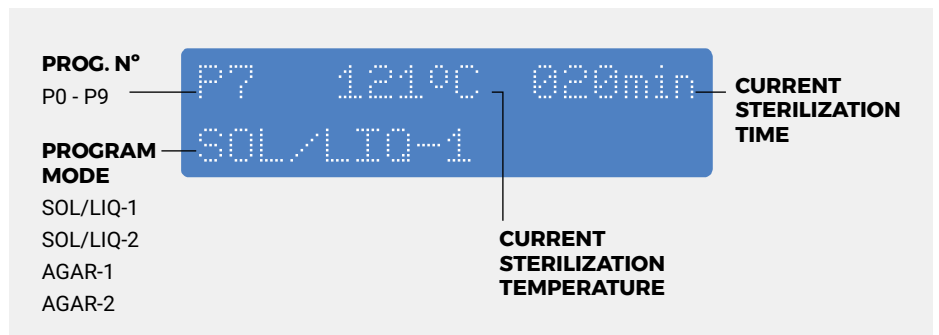

Sterilization cycle graph

FUNCTIONS DISPLAYED BY THE ALPHANUMERIC LCD SCREEN

The alphanumeric screen apart from showing the standard sterilization parameters also shows current sterilization phase and several visual alerts, including warning or failure messages. The available languages include English, Spanish, French and Catalan. For other languages please contact us.

Dimensions L x D x H mm		800 x 300 x 2100	800 x 300 x 2600
Power W		480	480
Voltage V		230	230
Frequency Hz		50/60	50/60
Weight Kg		40	45
Maximum load Kg		30	40
For autoclaves with the following chamber volumes	79 L	✓	-
	115 L	✓	✓
	175 L	-	✓

- Stainless steel electric lift system built into the side of the autoclave with swivel arm to help load and unload heavy items. The device is built into the side of the autoclave. Push-button operation with opening up to 200°.
- Motor with auto brake system in the event of obstacles or overload.
- Available in two models: the standard lift system and reinforced lift system.
- It can be factory fitted or retrofitted.

MOBILE BASKET LIFT SYSTEM

Reference	MOB-LIFT
Dimensions L x D x H mm	420 x 800 x 2200
Power W	200
Voltage V	90 - 250
Frequency Hz	50/60
Weight Kg	70
Maximum load Kg	30

- Stainless steel electric lift system with casters to help load and unload heavy items up to 30Kg.
- Equipped with long-life battery for cordless use.
- Push-button operation.
- Motor with auto brake system in the event of obstacles or overload.
- Compatible with any autoclave model.

*The purchase of a tray support comes with a set of two trays and six fastening clips. Likewise, the purchase of a tray includes a set of three fastening clips.

- For sterilization of instruments, small bags and other small objects that must be placed straight up.
- Material: AISI-304 stainless steel.

Accessories

FLEXIBLE PROBE TEMPERATURE PROBE PT-100 CLASS A

- After installing this accessory, the temperature regulation of the sterilization cycle can either be controlled by the main chamber temperature sensor or both the main chamber temperature sensor and the temperature sensor of the flexible core temperature probe.
- The temperature control by the flexible core temperature probe is especially advantageous for processes involving the sterilization of large volumes of liquids, where the sterilization process is regulated by both the temperature achieved in the center of the liquid sample as well as the temperature achieved in the sterilization chamber. Furthermore, should the autoclave be opened at chamber temperatures higher than 80°C there is a risk of liquids boiling over which can be avoided if the temperature of the sample is controlled throughout the sterilization procedure.
- Must be installed in our facilities.

Reference: **PT-2**

EXTERNAL TEMPERATURE PROBE ADAPTER

- External adapter for continuous validation processes that allows the access of an external probe (\varnothing 3-6 mm) to obtain a temperature reading independent from that of the equipment microprocessor.
- It is located on the door of the autoclave.
- Must be installed in our facilities.

Reference: **EXT-TP**

INTEGRATED THERMAL PRINTER

- Prints program number, cycle number, temperature, date and hour of the run and error messages.
- Selectable printing cadence between 10 and 240 seconds.
- Must be installed in our facilities.

Reference: **IT**

Consumable:
Paper: **PAPER-IT**

TABLE TOP DOT MATRIX PRINTER

- Prints program number, cycle number, temperature, date and hour of the run and error messages.
- Used with RS-232 connection.
- Selectable printing cadence between 10 and 240 seconds.

Reference: **ITS**

Consumables:
Paper: **PAPER-ITS**, Ribbon: **70945**

SW7000 SOFTWARE

- Communication software between the equipment and the PC that allows the real-time and posterior visualization and registry of each cycle. Cycles can also be exported to Excel or printed.
- Connection to PC via RS-232.
- Supplied with a RS-232 cable, an USB stick that includes the software and installation drivers and a RS-232 to USB adapter.

Reference: **SW7000**

Vertical autoclaves without drying

Accessories

PREMIUM CASTERS (2 WITH BRAKES)

- Although all AES Series autoclaves include casters, this accessory offers the option of upgrading them with a more resistant and higher quality casters that include brakes.
- Enables an easier movement of the equipment between different locations.
- Must be installed in our facilities.

Reference: **4WHBR**

TRANSPORT TROLLEY

- Auxiliary trolley to assist the loading and unloading of the autoclave.
- Built in chromed iron and plastic.
- The surface of each shelf is textured to prevent the load from shifting.
- Rubber coated wheels to reduce noise.
- Dimensions (LxDxH): 730 x 490 x 700 mm.

Reference: **TR-TR**

CONDENSATES BOTTLE

- 12L bottle with tap to collect condensates during purge phase and also to collect water while cleaning the sterilization chamber. Useful in situations where no easy drainage is available.

Reference: **TANK-AE**

CABLE GLAND

- Installation of a Ø2mm or Ø4mm cable gland to provide access to as many as eight external temperature probes for calibration and validation procedures.
- Must be installed at our factory.

Reference: **PRENSACLAV**

STERILIZATION CONTROL TAPE

- Class 1 indicator for steam sterilization. The change of color indicates that the materials have been processed, without being a guarantee of proper sterilization, additional methods are needed such as biological indicators (EN ISO 11138).
- Tape roll of 50 m x 19 mm.

Reference: **TEST-CT**

20 min 121°C
Color change.

Safety features

- Safety valve.
- Safety thermostat with manual rearm for the heating elements.
- Pneumatic door blocking system while positive pressure exists inside the sterilization chamber.
- Open door sensor.
- Thermally insulated door.
- Heating elements cover.
- Several visual and acoustic safety and warning alarms.

Regulations

All our AES Series autoclaves are designed to comply with the strictest international directives and standards, including the following regulations:

- **EN-61010-1** Safety requirements for electrical equipment for measurement, control and laboratory use. **Part 1:** General requirements.
- **EN-61010-2-040 Part 2-040:** Requirements for laboratory autoclaves.
- **EN-61326** Electrical equipment for measurement, control and laboratory use. EMC requirements.
- **AD 2000 Merkblatt** Pressure vessels.
- **2014/35/UE** Low voltage.
- **2014/30/UE** Electromagnetic compatibility.
- **2014/68/UE** Pressure equipment.

General features

Adjustable sterilization temperature	100 - 134°C
Adjustable sterilization time	1 - 250 min
Max. pressure	2,1 Barg
Sterilization control system	Fully automatic microprocessor control by either chamber temperature probe or flexible probe temperature probe
Air purge system	Gravity displacement
External building material	AISI-304 stainless steel
Sterilization chamber material	AISI-316L stainless steel
Heating elements material	Incoloy® 825
Gasket material	Silicone rubber
Connection to PC	RS-232
Connection to printer	RS-232 or integrated
Number of programs	10 (4 preset and 6 user free)
Programmable auto-start	Up to 24 h
Screen type	LCD display
Opening door mode	Horizontal swiveling door with blocking wheel
Monitoring of sterilization parameters	Self-control of obtained values (T° & t) vs programmed values. Cycle is automatically interrupted if obtained values differ from programmed values
Pressure display	Pressure gauge on control panel
Water management	Water is directly poured into the sterilization chamber
Drainage system	Drainage connection operated by an independent drainage valve on control panel for manual release of sterilization chamber water tank
Casters	Included standard casters, optional upgrade to premium casters with brakes
